

## Do I need a rolled steel joist (RSJ)?

My builder says that I need a rolled steel joist – do you design these? Do you do small projects?

Yes and yes.

Nowadays, they are called Universal Beams, but Rolled Steel Joists are designed to support elements of structures – walls, floors, roofs etc, where new openings are being made. For example, if you want to create a kitchen-dining room or add a window to your roof. It is essential that the beam be designed by an engineer so that your property remains insurable and mortgageable in the future.

Blackwell Structural Consultants has grown into a well-established practice; we work on multi-million pound projects for a wide portfolio of clients, however we value the domestic side of our business and pride ourselves on the personal and friendly service that we provide to domestic clients. Want to learn more about how we can help you with your projects at home, no matter how big or small? Why not get in touch?!
